Student Computer Specifications 2019-20 School Year

Each student in grade 5-12 must have his/her own computer. In an effort to maintain a single standard and to continue providing technical support on-site, all students Grades 5-12 use Apple computers.

Minimum computer specifications:

- Minimum operating system 10.14 Mojave (available as a free download from the App Store)
- Minimum of 4 GB RAM (more is highly recommended)
- Minimum of 10 GB free hard drive space
- A functional battery lasting at least 1 hour
- AppleCare+ extended warranty or another equivalent is highly recommended

These computer specifications should be adhered to as with any of the other school supplies required for students.

Student computer registration will take place prior to the start of school. During the registration process, the Technology Department will check your child's computer to ensure that it meets the minimum required specifications. A St. Andrew's Schools account that has administrator privileges will be created on the computer, in order to provide technical support and assistance to your child during the school day.

If you have any questions about this list or would like assistance in determining the specifications that best suit your child needs, please do not hesitate to contact the Technology Department, at technology@standrewsschools.org or (808) 524-3234.

Possible vendors

- Apple Store – <https://www.apple.com/us-hed/shop>
- Amazon.com
- BestBuy – often has sales with larger discounts than the Apple education discount
- Costco
